

Georgescu Mihnea

Freelancer / Junior Developer

I'm a web developer with a strong passion for creating websites that not only look great but also drive real sales. My love for sales and marketing helps me craft digital experiences that convert visitors into customers. I enjoy solving business problems with smart, user-friendly web solutions, and I'm always excited to explore new technologies that can enhance online success.

EXPERIENCE

★ Freelancing

Aprilie 2021 – Prezent @ Remote + București, România

- Throughout my freelancing career, I've had the opportunity to work on a wide range of products across various niches. I've developed everything from websites and web apps to custom solutions for clients with diverse needs. My projects have included creating landing pages for a psychologist clinic, as well as building custom Shopify solutions for businesses such as a company specializing in custom printed car fresheners and anything in between. This experience has given me a deep understanding of how to tailor digital solutions to different industries and drive results for my clients.

PROJECTS

★ Proxy Landing Page

Tech Stack: Next.js, TailwindCSS, Framer Motion, TypeScript

- Designed and developed a robust web platform using Next.js, enabling users to purchase and manage API access efficiently. The application features a dynamic, SEO-friendly landing page and a secure user dashboard accessible through unique tokens. Users can seamlessly view and manage their API keys, ensuring smooth integration and a user-friendly experience.

★ Freejack Namechanger 'hack'

Tech Stack: React, Vite, TailwindCSS, TypeScript

- This project replicates parts of the Freejack login system and demonstrates how its networking logic was functioning during its beta phase. While playing the game, I identified certain vulnerabilities in their use of a third-party API. This exploration revealed issues with unprotected endpoints that could be exploited to change usernames or access game-related data such as an exploit in their verification system to access "patreon keys" during beta.

★ Linktree clone with Supabase

Tech Stack: NextJS, Supabase, TailwindCSS, TypeScript

- A clone of Linktree, featuring a dynamic and responsive design, and a seamless user experience. With Supabase for authentication and database management. Users can create, edit, and delete their links, and view their linktree page. It also has web analytics to track the performance of each link.

SKILLS

IT | UI/UX | FrontEnd Development
BackEnd Development | Digital
Marketing | SEO | Responsive Design
Social Media Management | Software
Development | Strong Communication
Troubleshooting and Problem Solving
AI-Assisted Problem Solving
